Verified Carbon Standard (VCS) projects are built, creating Carbon credits for purchase.  
E.g. Hydropower, Wind turbine etc..

Carbon Expert negotiates directly with VCS project owners or brokers, obtaining the credits at the most competitive wholesale prices.

Carbon Expert keeps in continual contact with end user companies, consulting on what type of projects are in demand, and maximizing exit strategy.

Carbon Expert advise clients on diversification of portfolios, and implementation of carbon offsets.

2012 Legislation kicks in, along with ongoing supply chain pressure, and increasing corporate social responsibility pressure.

More participants enter the market and demand for offsets soar. This added liquidity leads to increased demand, which stimulates price pressure, forcing prices for Carbon offsets higher.

Carbon Expert exits clients in a 18-24 month period through pre-defined exit strategies.
